Managing Directors:

Jan Wywiol, Johannes Schneider

Octo Actuators is a global leader in the manufacture of ultra-thin drive technology (OctoMove, OctoFlex) for slatted bases, upholstered beds, and box spring beds (Octo-Box), as well as motorized adjustment systems for mattresses (E-Motion, S-Motion) and upholstered furniture.

OCTO Actuators GmbH Innovative Drive Systems – Made in Germany

Ultra-thin drive technology
6.5 cm – without metal
fittings

OCTO's drive technology fundamentally differs from that of other providers on the market thanks to its significant advantages.

First and foremost, the ultra-flat design—measuring just 6.5 cm—offers maximum flexibility for integration into design-oriented, motorized adjustable bed bases.

The minimal number of components reduces the total weight, and transportation is significantly more convenient and cost-effective compared to conventional slatted frames with a block motor and metal fittings.

System Capacity
160 kg – 2x 7,500 N

The system performance of the drive systems is outstanding and meets today's consumer requirements and needs.

The seat section with SeatMax technology is designed for all types of mattresses and always offers the best possible ergonomics without damaging the high-quality materials used in the mattress.

Lying comfort and ergonomics are optimized through the division of support zones to ensure the best possible fit within a motorized adjustable slatted base.

The mattress is no longer heavily compressed but instead comfortably conforms to the user's body shape. At any time and with infinite adjustability.

100% Storage Space

Maximize the use of your bedroom with 100% storage space under the bed.

Any storage space under the bed (bed box, canapé) can be put to good use.

With OctoMove and OctoFlex, there are no limits to creativity. At the same time, the drive systems offer the best possible safety thanks to the integrated free-wheel function.

Free-wheel function:
Safety in the drive system
Integrated

All drive systems are equipped with a practical safety feature. When the backrest or headrest is lowered, the sections are not moved to the zero position by motor power, but solely by their own weight.

Therefore, in the event that a body part becomes trapped, the maximum force exerted on that body part is the weight of the corresponding section of the reclining area.

Injuries and bruises are thus virtually impossible.

D-SYNCHRO
A Comfortable Connection with
Practical Benefits

The D-Synchro cable connects single- and dual-motor systems in a double bed. Both sides of the bed can be moved simultaneously.

Unlike other Y-cables of this type for block motors available on the market, the OCTO D-Synchro system not only connects two motors but also features two outputs.

This allows a control unit to be connected on each side of the bed, which significantly enhances ease of use in everyday life.

XSMART
MemoryReady—
Now Standard on All
Models

All OCTO drive systems come with an integrated memory function right from the factory.

An exclusive feature that defines the current state of the art in the segment of motorized adjustable bed bases.

With confidence and certainty, the user navigates directly to their desired position using the memory position recognition feature.

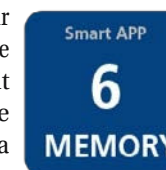

The question of whether the position just set is my personal ZeroG or reading position is a thing of the past.

XSMART Wireless Receiver

The motion sensor reliably turns the RGB night light on and off based on your personal settings.

Simply save your absolute favorite position and recall it precisely at any time with the push of a button.

XSMART APP
with extensive
features

“Keep it simple” for everyday use while offering advanced options when needed—that was the development goal for the new XSMART remote controls.

Users can primarily control the motorized adjustable base with a handy wireless remote control.

Additional functions are available as an app on your smartphone when needed.

XSMART combines the advantages of SMART technology, noticeably improves system performance, and ensures consistently maximum power during adjustment for all types of motorized bed bases.

XSMART
Perfection in every position

People and machines—a
strong team with a strong
focus on the customer

OCTO Actuators sets the highest standards for the quality and design of all its products.

For OCTO, “Made in Europe” means thinking and working with the mindset that “nothing is impossible”—from development all the way to the customer. First-class technical service, which begins as early as the product development phase in cooperation with customers, is a hallmark of OCTO.
